Bharat Kumar

Salesforce Developer | 4 Years Experience | 4× Salesforce Certified
Mathura, Uttar Pradesh, India | bharatmtr2002@gmail.com
LinkedIn: linkedin.com/in/kumar-bharat | Trailhead: salesforce.com/trailblazer/bharatkumar2002

PROFESSIONAL SUMMARY

- 4 years architecting scalable Experience Cloud, Sales Cloud, and Service Cloud solutions for global clients including Pinterest, Assurant, and CleverTap.
- Builds production-grade Apex and LWC applications with REST/SOAP integrations.
- Working knowledge of CI/CD tooling — Salesforce DX, GitHub Actions basics, and Copado-based release management alongside Change Set deployments.
- Turns manual, error-prone processes into reusable LWC component libraries and orchestrated batch/queueable job chains that cut hours of manual work and raise data quality.
- Holds 4 active Salesforce certifications — Platform Developer I, AI Associate, AI Specialist, and Associate — and is pursuing an MCA in Artificial Intelligence.

CORE SKILLS & TECHNOLOGIES

Salesforce Architecture: Experience Cloud, Sales Cloud, Service Cloud

Custom Development: Apex, Apex Triggers, Batch Apex, Queueable Apex, Scheduled Jobs, Anonymous Apex, SOQL/SOSL

Frontend: Lightning Web Components (LWC), Aura, Visualforce, reusable LWC design systems

Automation & Flows: Salesforce Flow, Process Builder, Workflow Rules, Approval Processes, batch job orchestration

Integration: REST / SOAP API, Connected Apps, OAuth 2.0, Quip, ClearTax GST Portal

DevOps & Deployment: Salesforce DX, Git, GitHub, GitHub Actions (basic), Copado, Apache ANT, Change Sets, Workbench, Jira

Languages & Databases: JavaScript, SOQL/SOSL, MongoDB (NoSQL), XML

Methodologies: Agile (Scrum), Sprint Planning, Technical Design Reviews, Requirement Gathering

AI / Data: Salesforce AI Specialist, Agentforce, Einstein AI

PROFESSIONAL EXPERIENCE

PCGI

Salesforce Developer | Dec 2025 – Present

- Audit and optimize complex Salesforce processes — performing systematic code reviews, governor limit analysis, and SOQL query tuning — to reduce inefficiencies and improve platform throughput.
- Work directly with international stakeholders across time zones to capture business requirements, translating them into detailed Jira user stories and scalable Apex/LWC technical architectures.
- Built a reusable LWC design-system kit and a dependency-free in-browser Excel (.xlsx) generation module, adopted across multiple production dashboards, plus an Apex error-logging framework for async batch and queueable jobs.
- Implemented business-day logic to align the team's IST working hours with the client's US business calendar, so scheduled batch jobs and SLA timing run on the correct day.
- Manage end-to-end project tracking and production deployments across sandbox environments using Change Sets and Copado, maintaining consistent release quality.
- Implemented Agentforce to prototype AI agents for business process automation.

Fexle Services Private Limited
Salesforce Developer | May 2022 – Jun 2025

- Built high-performance Salesforce solutions using LWC, Apex classes, and triggers — strictly adhering to governor limits and bulkification best practices to support large-scale global user bases.
- Led an enterprise-wide migration from Salesforce Classic to Lightning Experience, improving UI responsiveness and increasing daily active user adoption.
- Carried out root cause analysis on high-priority production bugs, applying structured debugging and regression testing to reduce system downtime and improve application stability.
- Supported CI/CD pipelines using Salesforce DX and Git-based workflows, and contributed to technical design reviews that helped reduce deployment cycle times across parallel project tracks.
- Maintained consistently >90% test coverage across all deployments by writing comprehensive Apex test classes adhering to Salesforce best practices.

KEY ENTERPRISE PROJECTS

MNK (Healthcare)
Role: Salesforce Developer | Company: PCGI | Environment: Batch Apex, Queueable Apex, LWC

- Built a PA Re-Auth Hub: a weekly batch-and-queueable job chain that identifies patients whose Prior Authorization expires within 40 days, auto-creates Reimbursement cases, triggers electronic benefit verification (eBV), and syncs results to the ARMory system — surfaced in a real-time LWC dashboard for the support team.
- Built an Outbound Fax Analysis engine that classifies the daily fax queue (New & Pending, Cancelled, Error, Sent, SRx, oversized), then auto-generates downloadable Excel workbooks and draft overview emails, eliminating manual report compilation.
- Redesigned Daily Data Checks into a single actionable to-do list with one-click auto-fix actions, and added an hourly Batch Orchestrator tab for visibility into scheduled job health across the org.
- Authored developer architecture documentation and end-user guides adopted as the team's reference for both dashboards.

Assurant (Insurance)
Role: Salesforce Developer | Company: Fexle | Environment: Service Cloud, LWC, Aura, Visualforce

- Collaborated within an 18-member global Architecture Team to scale a highly customized, enterprise-grade insurance management platform on Salesforce Service Cloud.
- Modernized a legacy Visualforce-heavy UI by migrating 50+ complex pages to LWC and Aura components, improving page load times and cross-browser compatibility.
- Optimized Service Cloud workflows via automated case routing, escalation rules, and SLA tracking, improving case resolution times and CSAT metrics.

CleverTap (Customer Engagement)
Role: Salesforce Developer | Company: Fexle | Environment: Batch Apex, Scheduled Jobs, Connected Apps, Quip

- Built a scalable backend data processing architecture using Batch Apex and Scheduled Jobs within a 7-member cross-functional pod, handling high-volume record processing within governor limits.
- Integrated Salesforce with Quip via Connected Apps, enabling secure document sharing and real-time collaboration for distributed global teams.
- Maintained strong data integrity with test classes achieving >90% code coverage across all deployment cycles.

Pinterest (Digital Advertising)
Role: Salesforce Developer | Company: Fexle | Environment: Sales Cloud, LWC, Salesforce Flow

- Built modern, responsive Sales Cloud interfaces for global sales teams by developing custom LWC components within a fast-paced 10-member delivery pod.
- Implemented complex Order and Quote management functionalities within Sales Cloud, streamlining the digital ad sales lifecycle and reducing quoting errors.
- Replaced deprecated Process Builder automations with declarative Flows, reducing technical debt and improving long-term maintainability.

Robotex (Real Estate)
Role: Salesforce Developer | Company: Fexle | Environment: Apex, LWC, REST API, ClearTax GST Portal

- Automated financial reporting workflows by building secure REST API integrations between Salesforce and the ClearTax GST Portal.
- Developed Apex backend logic and LWC frontend enhancements to support the scaling of a comprehensive real estate management platform.

INDEPENDENT SOLUTIONS

Transaction Inspector
Personal project | Apex, Queueable, LWC, React, Tooling API, Named Credentials

- A developer tool that shows what a single record save actually runs: the SOQL queries, DML, flows, triggers, callouts and async jobs, grouped by transaction with their governor-limit usage.
- Captures a save in one of three ways (a rolled-back test run, a live trace of a real user, or a sandbox commit that follows async chains) and points out common problems, such as queries inside loops, with a suggested fix.

Scheduled Jobs Manager
Personal project | Apex, Batch Apex, Queueable, LWC, React, Custom Metadata

- Moves an org's scheduled jobs under one hourly orchestrator, so admins can view, pause, edit and run them from a single screen instead of managing separate System.schedule jobs.
- Checks available async capacity before each launch and only runs classes on an allow-list; a cron parser in Apex and JavaScript explains Salesforce cron expressions in plain language.

SALESFORCE CERTIFICATIONS

- Salesforce Certified Platform Developer I
- Salesforce Certified AI Specialist
- Salesforce Certified AI Associate
- Salesforce Certified Associate

EDUCATION

Master of Computer Applications (MCA) — Artificial Intelligence | Chandigarh University | Currently Pursuing

Bachelor of Computer Applications (BCA) | Bon Maharaj Institute of Management & Technology, Mathura, Uttar Pradesh | Aug 2019 – Jul 2022
